

Activities

Waalhaven Botlek Terminal is a terminal managed by the Waalhaven Group for barge containers in Rotterdam.

It is strategically situated between Rotterdam City terminals and the Maasvlakte terminals and also serves as a main transshipment hub for containers to and from all Antwerp en Rotterdam container terminals and depots.

Waalhaven Botlek Terminal is a barge oriented terminal with all facilities to handle cargo efficiently and with required service levels. The terminal is equipped with reefer connections and can handle hazardous cargo. The BRZO-license permits long stay for these containers.

The terminal is a Customs area 'Entrepot C'. This enables our clients to tranship their containers with minimal Customs procedures and documentation. We can assist you with almost all Customs formalities through the qualified personnel of Waalhaven Douane Service B.V.

We are embedded in the Intermodal Transport Concepts of PSA Antwerp and Maasvlakte, and offer you services other terminals cannot, or only at higher costs. These services include barging, storage of full and empty containers, Customs services and additional trucking.

Combined with the repair and cleaning facilities on our terminal via UWT, the terminal provides a unique all-in service concept in the Port of Rotterdam.

- Container Terminal
- Multimodal
